

Project Design Phase-II

Data Flow Diagram & User Stories

Date	25 June 2026
Team ID	SWTID-2026-8141
Project Name	Heart Disease Analysis and Visualization Dashboard
Maximum Marks	4 Marks

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD depicts the right amount of system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Level 0 (High Level):

Heart Disease Datasets → Data Cleaning & Preprocessing → MySQL Database → SQL Analysis → Tableau Desktop → Interactive Dashboard & Story → Tableau Public → Flask Web Application → End User (Clinician / Researcher / Patient).

User Stories

User Type	Functional Requirement (Epic)	US No	User Story / Task	Acceptance Criteria	Priority	Release
Clinician	View Dashboard	USN-1	As a clinician, I can view the interactive heart disease dashboard.	Dashboard loads successfully.	High	Sprint-1
Clinician	Assess Risk Factors	USN-2	As a clinician, I can compare patient age, cholesterol, BP, and chest pain type.	Risk-factor comparison displayed correctly.	High	Sprint-1
Researcher	Analyze Regional Cases	USN-3	As a researcher, I can view an interactive map of cardiac hospitals and case distribution.	Interactive map displays hospital and case data.	High	Sprint-1
Hospital Admin	Compare Hospital Infrastructure	USN-4	As a hospital admin, I can compare hospitals by region, type, and ICU capacity.	Comparison chart displayed correctly.	Medium	Sprint-2
Patient	View Treatment Cost	USN-5	As a patient, I can view expected treatment cost by risk category.	Cost comparison chart displayed correctly.	Medium	Sprint-2
Analyst	Explore Diagnosis Trends	USN-6	As an analyst, I can explore diagnosis distribution through an interactive Tableau Story.	Story loads with all scenes.	High	Sprint-2
