

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	25 June 2026
Team ID	SWTID-2026-8141
Project Name	Heart Disease Analysis and Visualization Dashboard
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Collection	Import heart disease datasets (clinical data, regional cases, hospital list, treatment cost database).
FR-2	Data Processing	Clean, validate, and organize patient and hospital datasets for analysis.
FR-3	SQL Analysis	Execute SQL queries to analyze risk factors, diagnosis patterns, and hospital data.
FR-4	Dashboard Creation	Build interactive Tableau dashboards for diagnosis, risk, and cost analysis.
FR-5	Story Creation	Build an interactive Tableau Story explaining key patient and hospital insights.
FR-6	Web Integration	Embed the dashboard and story into a Flask web application.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	User-friendly interface with interactive dashboards and easy navigation.
NFR-2	Performance	Fast loading and smooth visualization of patient and hospital datasets.
NFR-3	Reliability	Accurate data processing and consistent dashboard performance.
NFR-4	Availability	Dashboard and project accessible through Tableau Public and GitHub.
NFR-5	Scalability	Architecture supports adding new datasets, dashboards, and analytical features.
NFR-6	Privacy & Security	Patient data is anonymized; no personally identifiable clinical records are stored.
NFR-7	Maintainability	Modular folder structure separates datasets, SQL, Tableau, and documentation.
