

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	19 July 2026
Team ID	SWTID-2026-8141
Project Name	Heart Disease Analysis using Tableau
Maximum Marks	4 Marks

Step-1: Heart disease remains one of the leading causes of death worldwide. Large healthcare datasets containing patient age, gender, cholesterol, blood pressure, ECG, chest pain type, and other clinical attributes are difficult to interpret manually. This project develops an interactive Tableau dashboard to visualize patient trends, identify risk factors, and support data-driven healthcare decisions.

Step-2: Brainstorm Ideas

Idea	Proposed Idea	Advantages	Limitations
1	Basic patient report	Simple	No analytics
2	Excel dashboard	Easy	Limited visuals
3	Power BI dashboard	Interactive	Less storytelling
4	Tableau Dashboard + Story	Rich interactive analysis	Requires Tableau
5	Flask website with embedded dashboard	Centralized access	Needs deployment

Step-3: Idea Prioritization

Proposed Solution	Importance	Feasibility
Data Cleaning	High	High
Risk Factor Analysis	High	High
Interactive Dashboard	High	High
Patient Trend Analysis	High	High
Disease Prediction Insights	High	Medium
Flask Integration	Medium	High
GitHub Documentation	Medium	High
